Abstract

The aim of the research is to identify the extent to which the strategies of self-presentation and orientation towards life contribute to Predicting the neurotic perfection among university students. The number of the sample population reached 182 students, whose ages ranged between (18-23) years, and the scale of self-introduction strategies was prepared by Al-Asimi, aldabu 2011- The question of orientation towards life. Badr Muhammad Al-Ansari's interpretation (2001) (Perfectionism scale) Neuropathy: The researcher's preparation 2020: The results showed that there is a correlative relationship between the total degree of strategies for self-presentation and orientation towards life, and there is a correlative relationship at a level of significance (0.01) and positive between strategies of self-

presentation (intimidation) and neurotic perfection (blame and self-criticism) among university students. Relational relationship A machine at the level of significance (0.05) and negative between orientation towards life as a whole and exaggeration among university students. Neurotic perfectionism can be explained in light of idealism, intimidation, and a tendency toward life.
